- Implement game inspired by Doodle Jump
- Using C++ and SFML
- Focus on good code design and quality

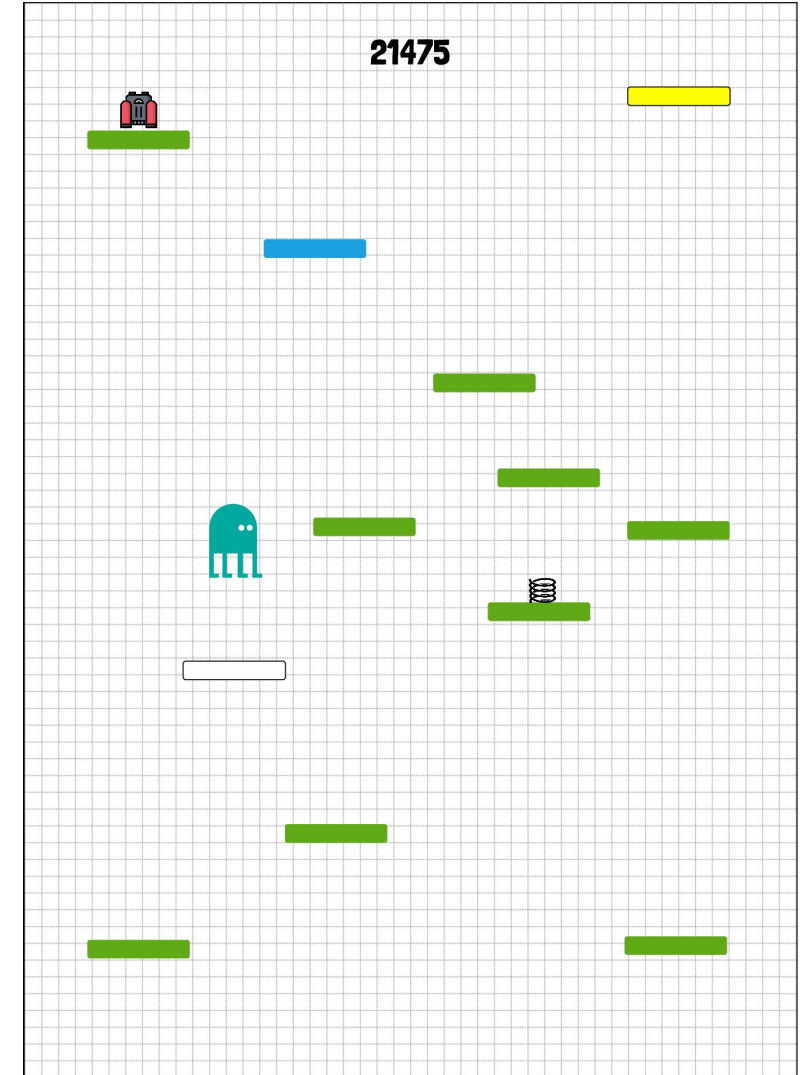

# Gameplay

- Automatically jump up and down
- User input to move left or right
- Pass through platforms from below
- Bounce off platforms from above
- Climb as high as possible!
- Infinite world generation
- Camera scrolls up with player

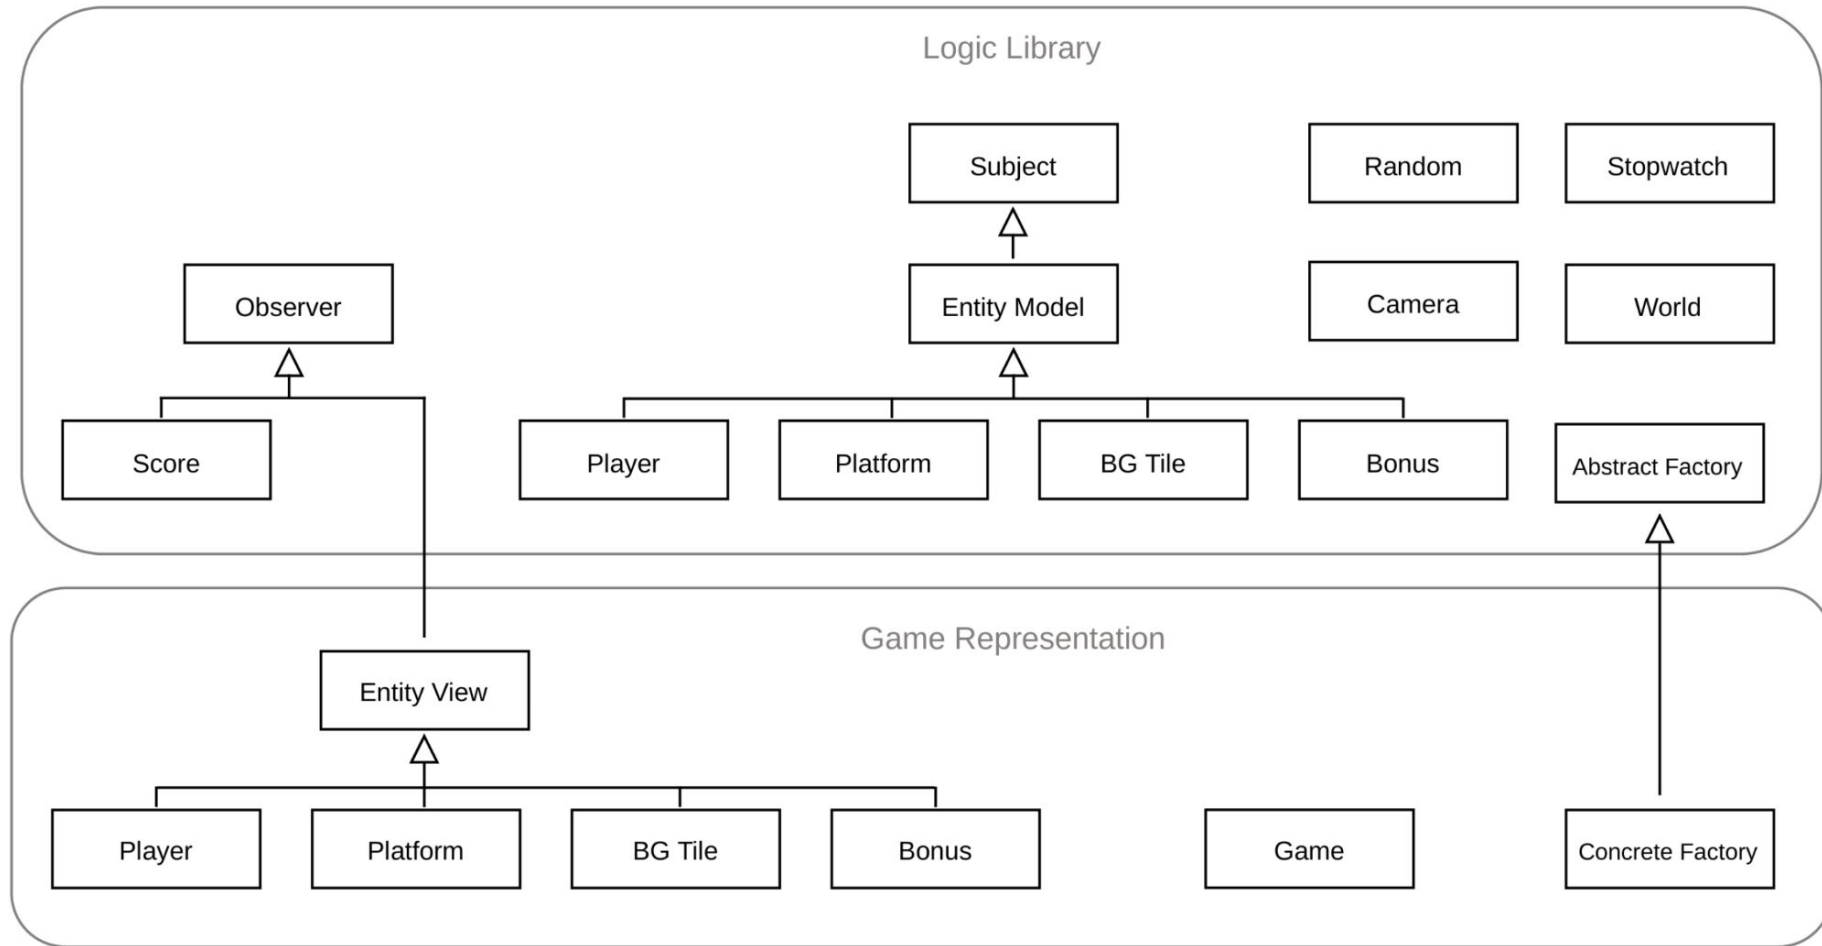

# Gameplay

- **4 Different platform types:**
  - Static (Green)
  - Horizontal (Blue)
  - Vertical (Yellow)
  - Temporary (White)
- **2 Different bonuses:**
  - Springs
  - Jetpacks

# Design

# Required Classes

- Game
- Stopwatch
- Camera
- Random
- World
- BG Tile
- Bonus

# Design Patterns

- Model-View-Controller (MVC)
- Observer
- Abstract Factory
- Singleton

# Grading

- **40%:** Core game requirements
- **40%:** Good design and code quality
- **10%:** Project defense
- **10%:** Documentation & Report
- **10%:** Bonus points

# CI/CD

- Create a **private** GitHub repository and invite *thomasave*
- Set up a CI platform to automatically build your project
  - Instructions for CircleCI listed on the lab session webpage
  - Make sure I can view the build configuration and result
- Final commit must show a successful build on GitHub

# Questions

- Are there any questions?
- Post a new thread on the Blackboard forum for the project
- Send an e-mail to [Thomas.Ave@uantwerpen.be](mailto:Thomas.Ave@uantwerpen.be)
